

A COST-EFFECTIVE, TIME-SAVING SOLUTION

The Conco Companies expertly produce and place Confoam™, also known as foam concrete, which is one of the most productive, cost-effective solutions for a large variety of applications. Confoam™ benefits include:

- **No Compaction Required – Self-compacting Confoam™ is more consistent and has no impact on retaining structures or deep foundations.**
- **Lightweight – Confoam™ weighs considerably less and eliminates the need for expensive foundation solutions.**
- **Settlement-Free Construction - Confoam™ can be produced to weigh less than or equal to the removed soil and virtually eliminates any settlement.**
- **Safer Placement – Confoam™ is a safer alternative and eliminates the need to put employees in the excavation area.**
- **Easily Excavatable – Confoam™ is easy to excavate with common construction equipment or, in the case of some low strength mixes, just a shovel.**

Our proprietary Confoam™ is a lightweight, low-density fill material that is customized for each specific application and provides benefits that cannot be achieved with traditional construction materials. In addition, Conco has the specialized production equipment and the professional know-how to safely and skillfully place the highly flowable, cellular lightweight concrete to save projects both time and money.
