

# —CONCRETE DESIGN/BUILD—

## WE HANDLE THE ENTIRE PROCESS

The Conco Companies have been providing high-quality concrete services to the Western United States since 1959. Our extensive background has allowed us to evolve into a full service provider to the construction industry. Our professional Concrete Design/Build services include a structural engineer to collaborate during the design phase so that our client receives a cost efficient concrete system with their first set of structural drawings.

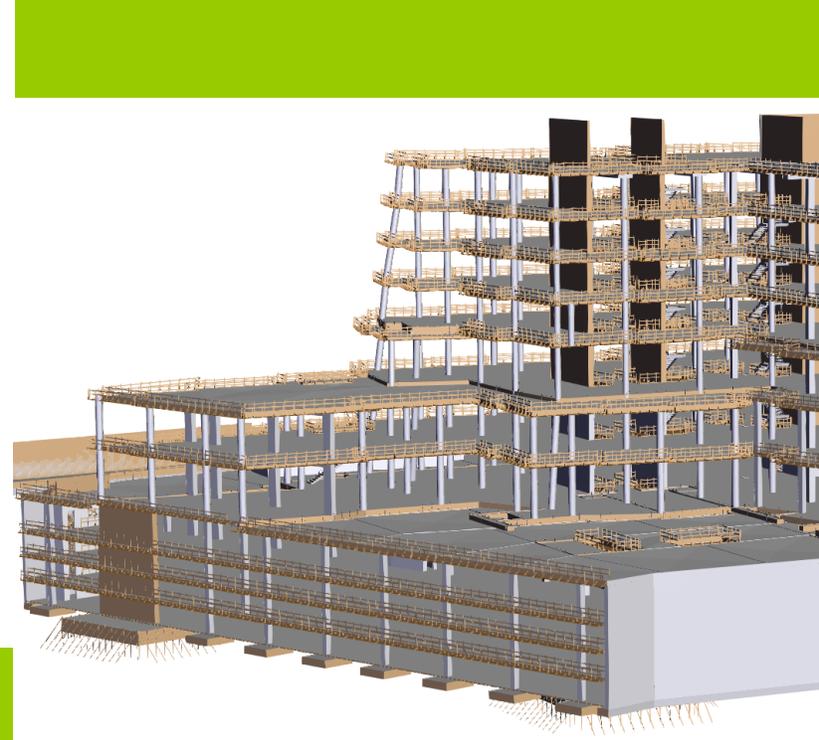

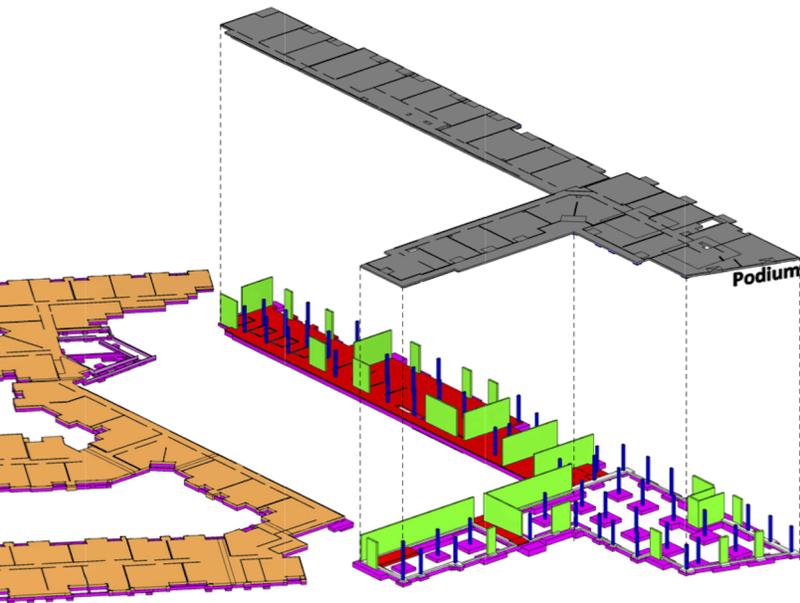

Builders save time and money by avoiding costly change orders. Our Conco design-build team also works with the other design professionals (architect, wood structural engineer, civil engineer, etc.) early on in the process which can be highly beneficial with today's complex building designs.

### Concrete Design/Build Services

- **Reinforced Concrete Design**
- **Concrete Building Design**
- **Concrete Building Information Modeling**

Conco is one of the only concrete contractors in the Western U.S. to have the resources of both Conco Reinforcement and Conco's large Concrete Division.
